

## ESP32 operation and programming method

- Connect the ESP32 with a cable, then install it on the board.
- Then download the Arduion software.

## ESP32 ID Code.....

### Define pinMode, so that Arduino can handle it

[illegible]

**Then complete the rest of the code ( Code is not required )**

## On board..

- Connect the negative terminals using a jumper.
- Then connect any negative terminal with ESP32.
- After that we connect the LED to all the terminals which are indicated in (pinMode) that we programmed the Arduino on.
